OF TRANSPORTATION

# Implementing the Network

## *Challenges and Solutions*

Danny Pleasant, AICP  
Charlotte Dept of  
Transportation  
November 6, 2008

CHARMECK.ORG

Discuss challenges to network connectivity and what Charlotte is doing to overcome them.

- Charlotte's first comprehensive transportation plan
- Describes policies, projects and programs
- USDG are the "streets" component of the TAP
- Many TAP policies either
  - refer to the USDG or
  - depend on the USDG for full implementation

## TAP Objective 2.9

The City will maintain its connectivity ratio of 1.45 inside Route 4, and increase its connectivity ratio outside Route 4 from 1.19 to 1.35, by 2015.

## Three Key Concepts in the TAP and USDG

1. Context-based streets
2. "Complete" streets
3. "Complete" street network

- Sidewalks – match the width to the context
- Planting strips – make them wider for street tree canopy
- Bicycle lanes and signed routes (Bike Plan) – provide more options for more cyclists
- Intersection analysis and design – make them safer and more functional for all
  - Bicycle and Pedestrian Levels-of-Service
- Traffic calming – build it into new streets
- Six-step process – use it to create better streets

CITY OF CHARLOTTE

Having better streets means  
we need to have more streets

**Intersection Level of Service**  
AM & PM Peak Hour

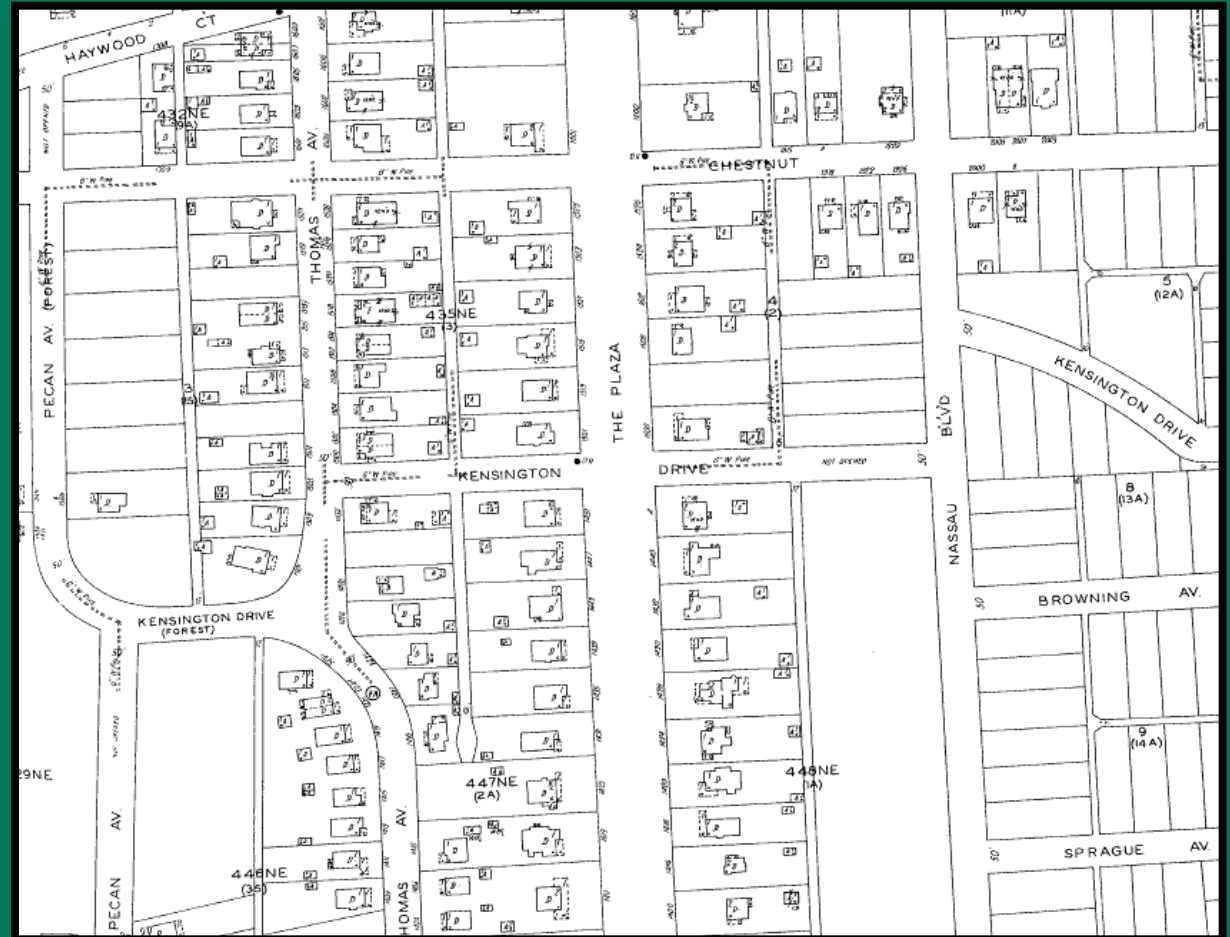

- Moderate (0.85-0.94)
- High (>0.94)

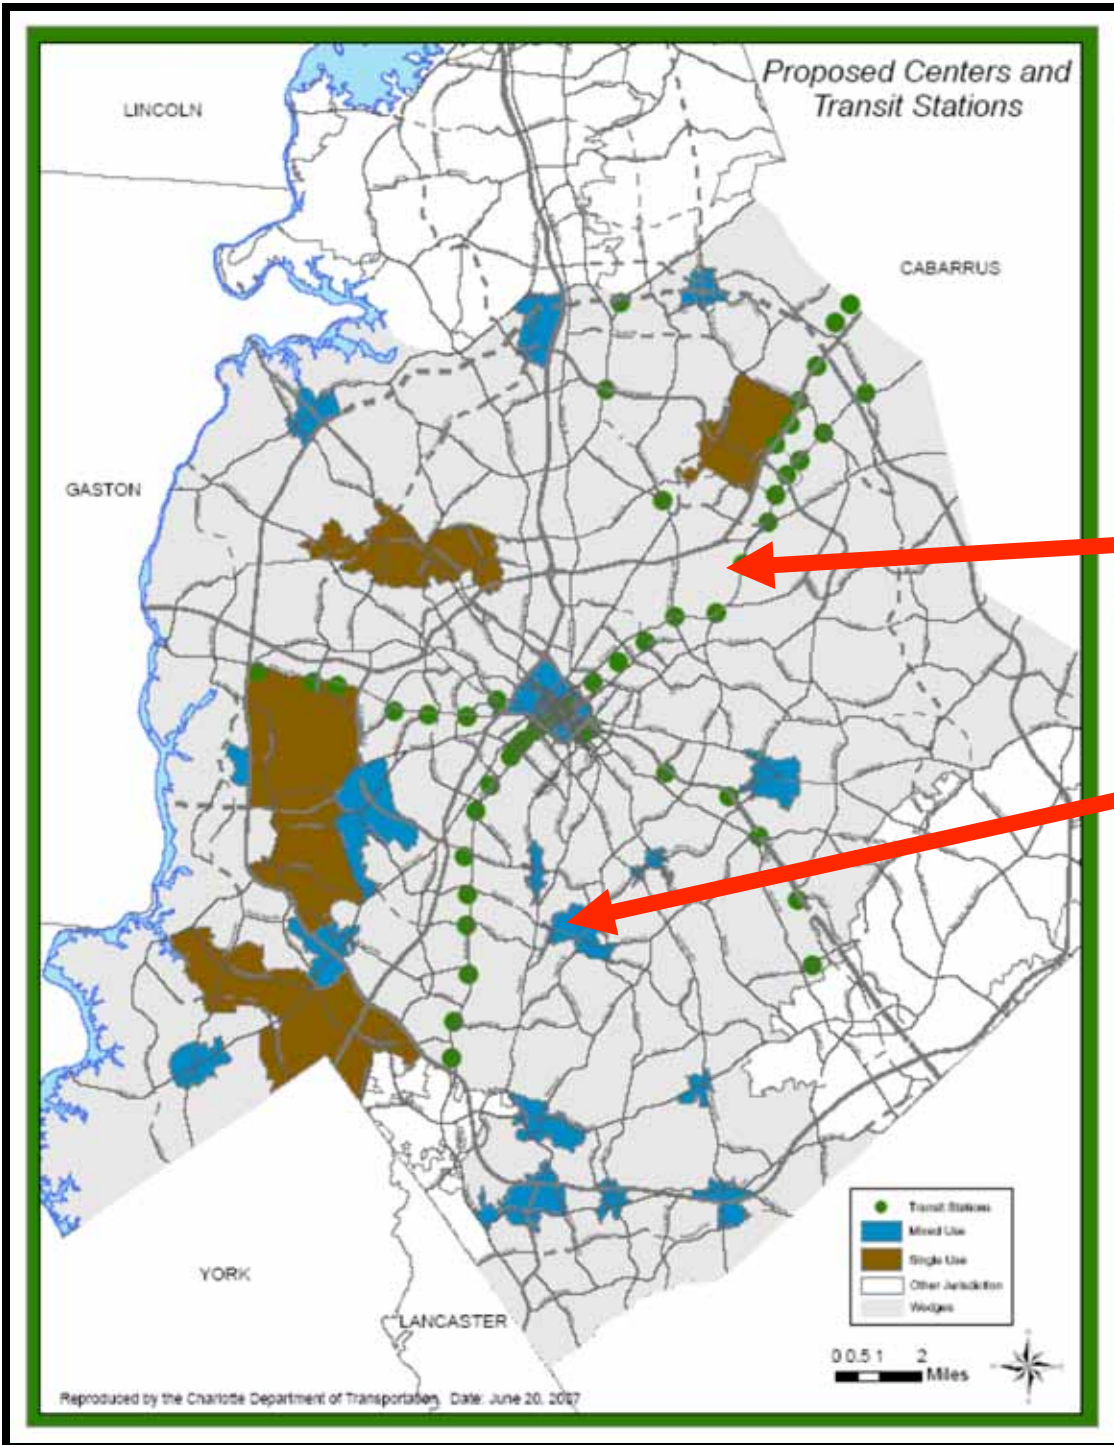

## The USDG Calls for Smaller Blocks and Appropriately Designed Streets

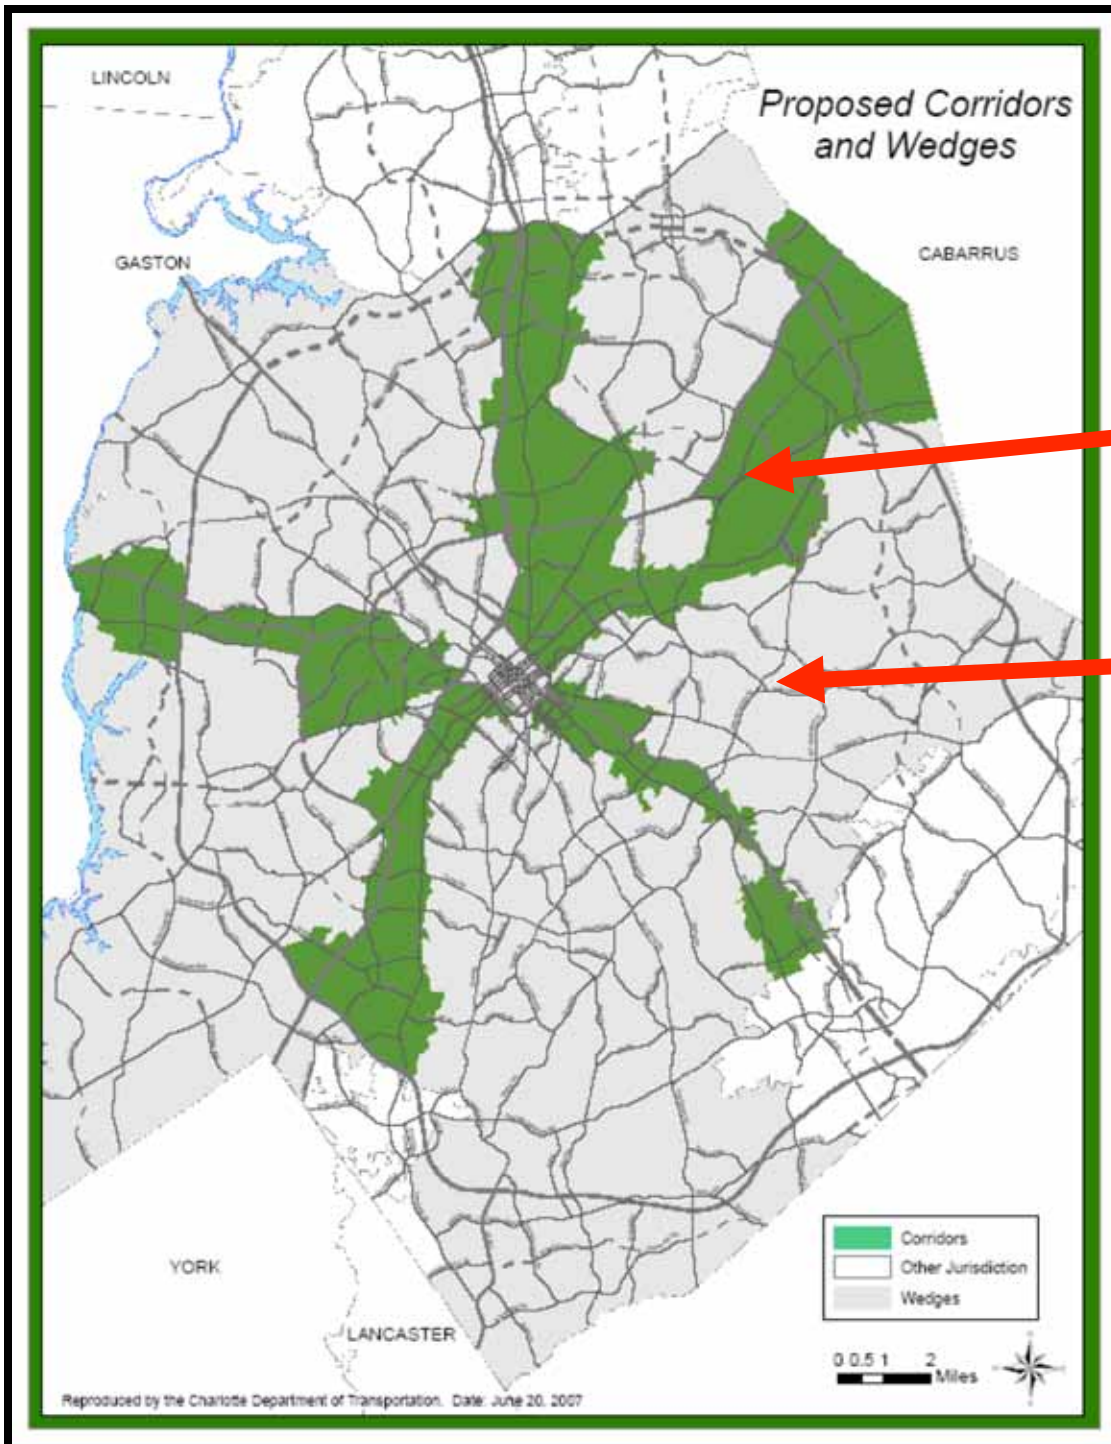

- Connections
- Walkability
- Route choices
- Development flexibility
- Capacity

400' blocks

500' blocks

600' blocks

500' - 800'  
blocks  
(depends on  
land use)

## More Than Just Internal Block Size

- Recommend connections (streets) to adjacent development at the same intervals as internal blocks
- Recommend more creek crossings, but at larger intervals than other connections

## Challenges to Building the Network:

- Keeping the connections we already have
- Decades of disconnected development
- Getting enough new connections through green field development
- Getting connections through re-development and infill
- NIMBYism
- The natural environment – creeks and topography
- Funding – who pays?

CITY OF CHARLOTTE

## Challenge

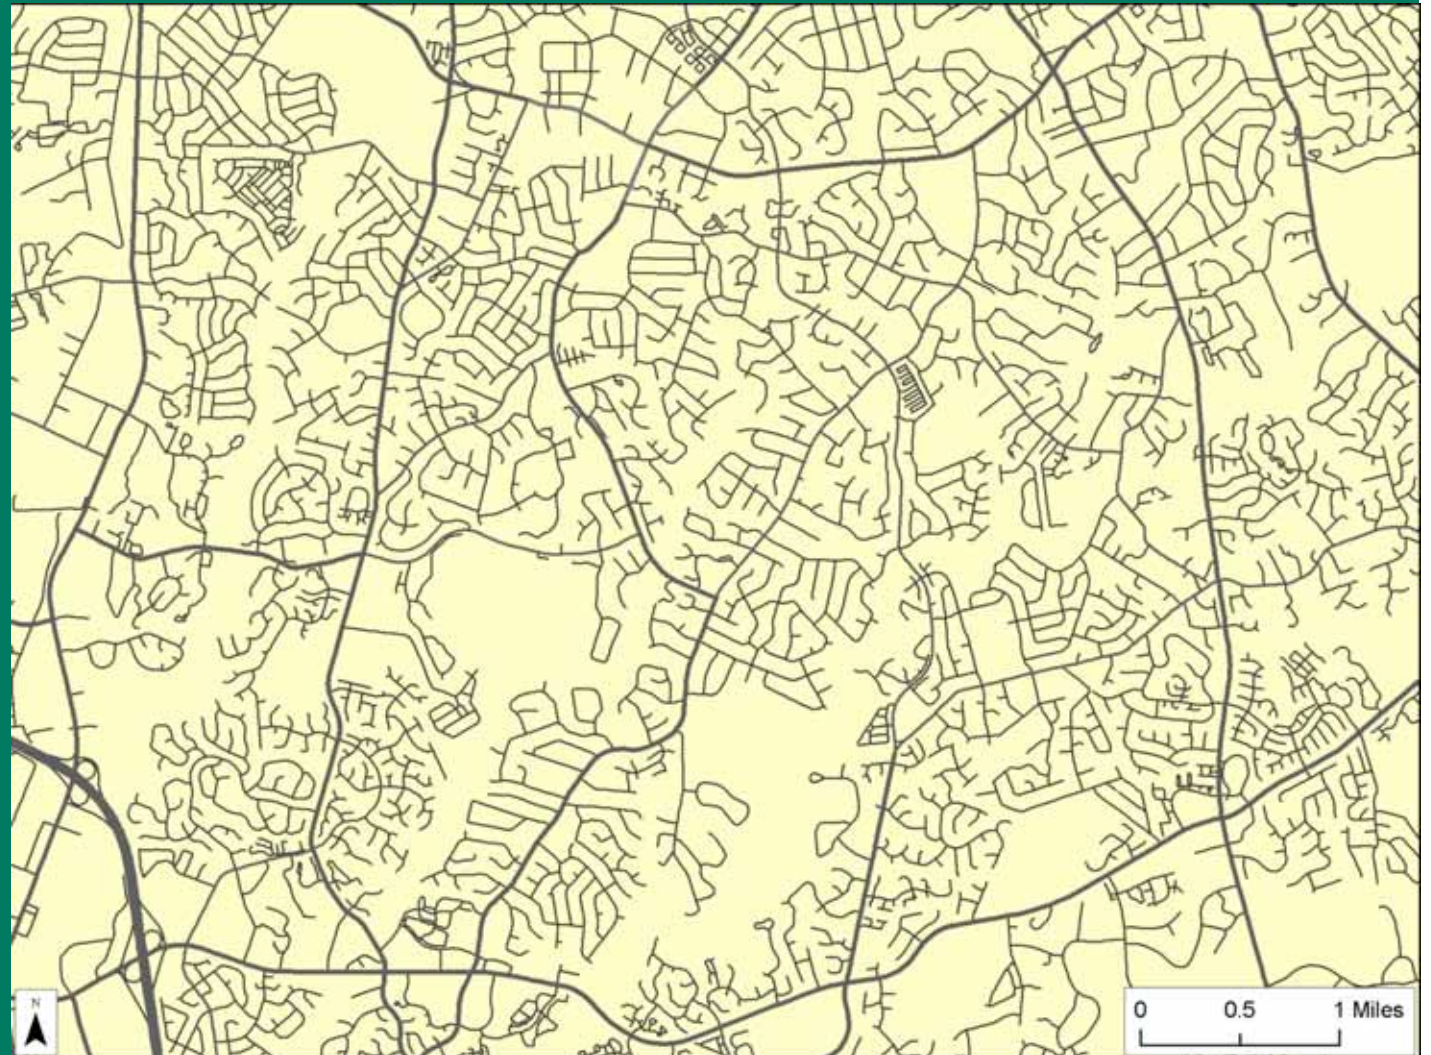

Keeping  
existing  
connections

## Challenge

Decades of  
Building  
Disconnect  
ed Network

## Challenge

Topography  
can prevent  
connections

Challenge:  
Infill and redevelopment opportunities lost

0 200 400 Feet

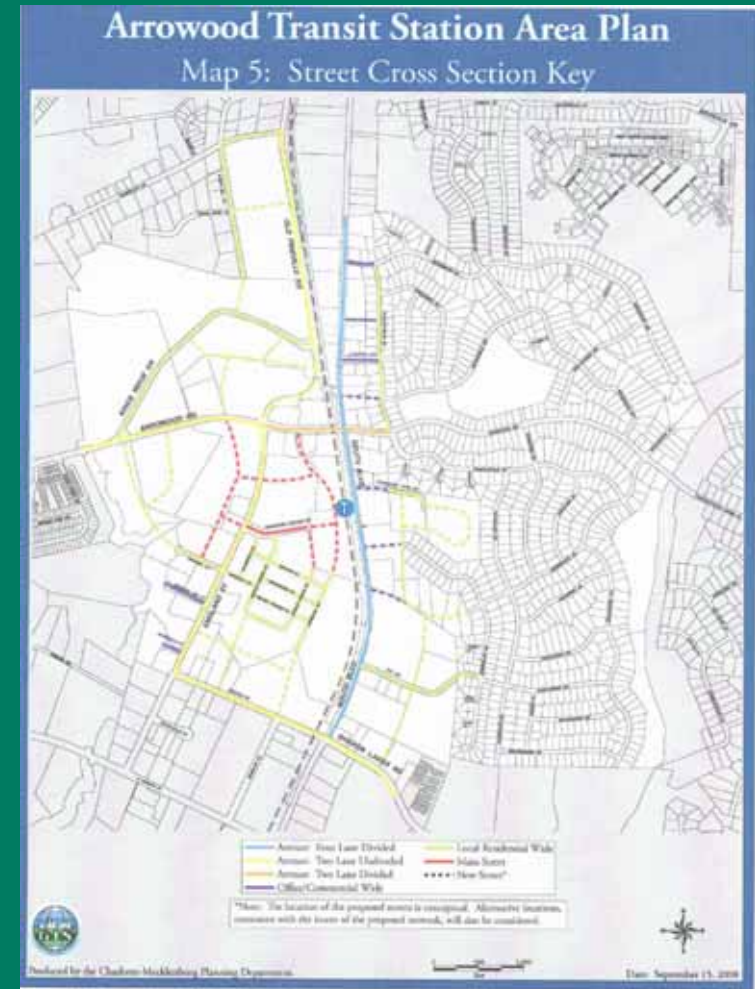

## Challenges

- NIMBYism (sometimes)
- Funding

# Getting More Streets

- CIP projects
  - Major Roadway
  - Intersections
  - Sidewalks
  - Neighborhood Improvement
  - Connectivity
  - Traffic Calming
- Area plans
- Rezonings
- “By-right” development?

## Amending the City Code to reflect USDG:

- Subdivision Ordinance
- Zoning Ordinance
- Expect particular emphasis on block lengths, spacing of connections, spacing of creek crossings
  - “Exclusions and allowances”

Intended to provide exceptions to “hardships” –  
the general question:

- Build the street?
- Build a public street or a private street?
- Build a stub?
- Simply preserve the ability to build a future street?
- None of the above?

CITY OF CHARLOTTE

- Re-development – challenges and opportunities

CITY OF CHARLOTTE

# The Metropolitan

# The Metropolitan

- The policy guidance is in place
- The need for more (and better) streets is clear
- Many of the same challenges still exist
- Ordinance updates will be challenging, as well
- Combining clarity with flexibility is key
